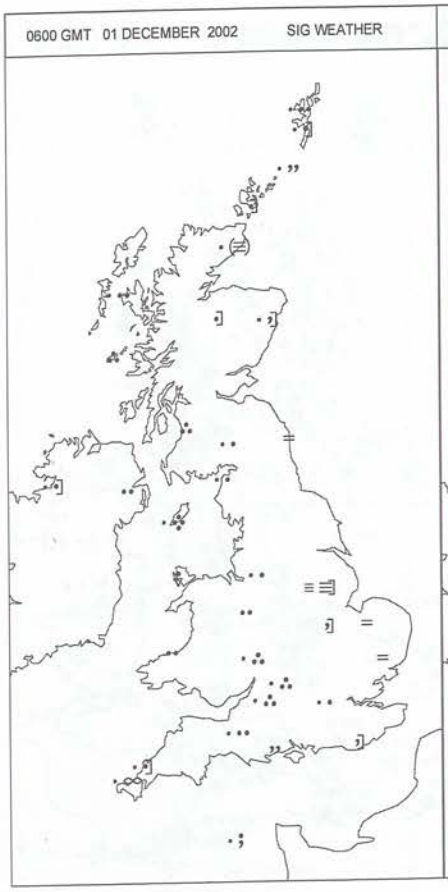
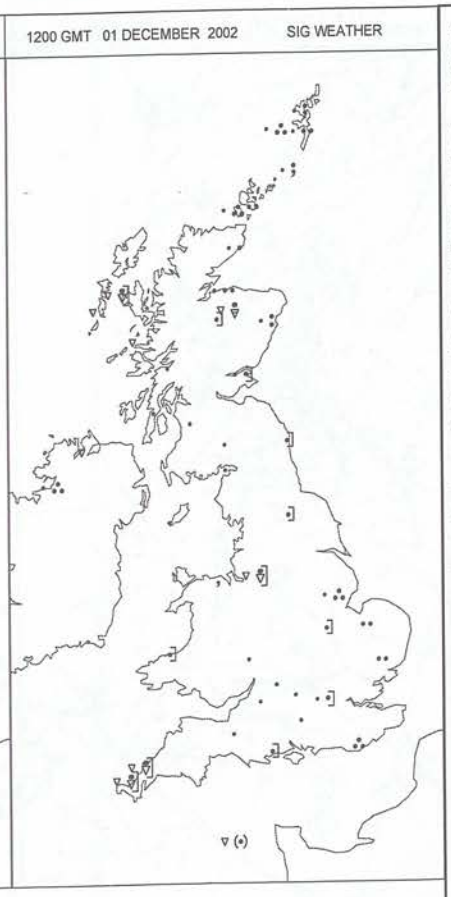
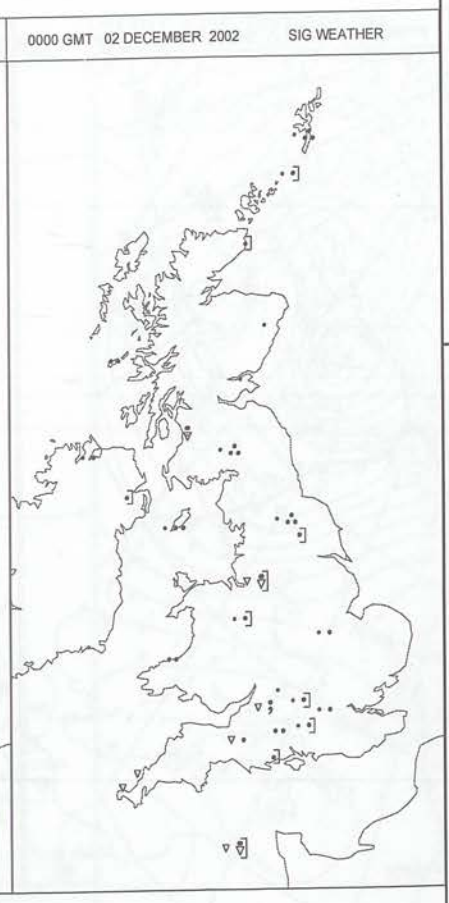
SIGNIFICANT WEATHER







Summary of UK Weather for Sunday 01 December 2002.

The night started wet over parts of eastern England but the rain quickly moved away to leave central and eastern parts of Britain dry for a while with clear intervals. Patchy fog formed locally over central and northern England, before thickening cloud, outbreaks of rain, and strengthening southerly winds spread from the west. During the day, Scotland and northeast England stayed mostly cloudy with showers, these merging at times into longer spells of rain. However, there were a few sunny intervals, mainly over eastern Scotland. Northern Ireland had sunshine for a while during the morning, but increasing cloud led to frequent showers in the afternoon, merging later into longer spells of rain. Wales had showers or longer spells of rain, with hail reported at Cardiff in the afternoon. However, there was some morning sunshine. England, apart from the northeast, had outbreaks of rain moving away eastwards during the morning, followed by sunshine, but followed, in turn, by afternoon showers in the west. Western Britain became windy.

Temperatures were near normal over Scotland but most places had a mild day.

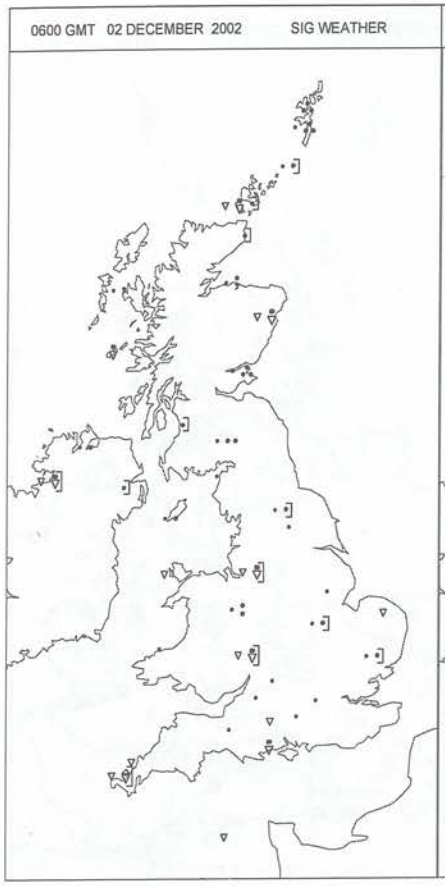
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 02 December 2002.

Most of the country had a cloudy night with showery rain in places. The heaviest rain was over central and North Wales. Whereas parts of eastern England stayed dry. It was windy in much of western Britain with west or northwesterly gusts locally exceeding 55 knots. Over Shetland, southeasterly gusts reached 58 knots.

During the day, there was still a good deal of cloud with further showers or longer spells of rain, particularly in the west and north. Once again, the heaviest rain mostly fell in the west. Many places had at least a few glimpses of sunshine, with the best of the sun occurring along the southern coasts of both England and Wales. During the evening, some heavy bursts of rain fell across central and northern England, especially over the Peak District and the western side of the Pennines. Winds slowly decreased in strength during the day.

It was generally mild.

EXTREMES

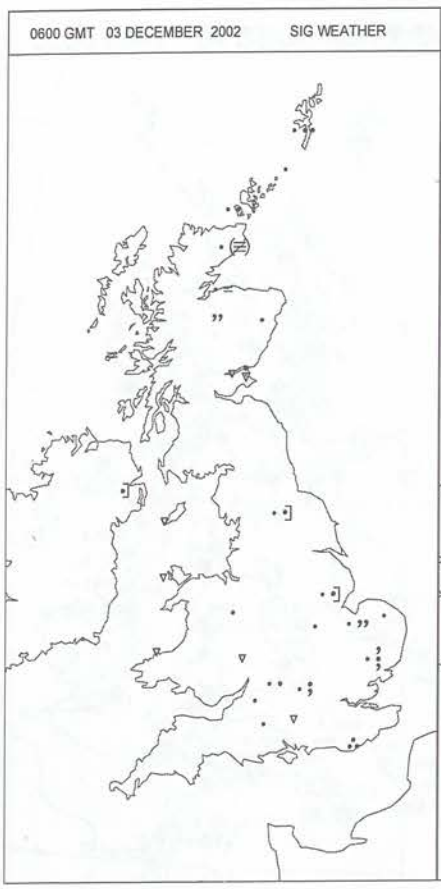
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 03 December 2002.

Overnight there were outbreaks of rain over parts of Wales and the Midlands and these moved southeast, clearing southeast England around dawn. Showers also occurred over eastern Scotland but elsewhere the weather was generally dry.

During the morning showers continued across parts of eastern Scotland and there was patchy rain over parts of England and Wales, but elsewhere it was mainly dry with bright or sunny intervals. The best of the sunshine was near the south coast of England, in particular at Bournemouth, but even there less than 4 hours was recorded. Rain reached Northern Ireland, the western isles of Scotland, west Wales and southwest England during the afternoon and this moved slowly east. Ahead of this there were further showers over eastern Scotland and patchy rain elsewhere, interspersed with bright or sunny intervals. The rain extended across much of Wales during the evening, by which time it had turned misty in parts of eastern England.

Temperatures were mostly slightly above average or in the mild category.

SIGNIFICANT WEATHER

Summary of UK Weather for Wednesday 04 December 2002.

The night started cloudy across Scotland, Northern Ireland, Wales and western parts of England, with outbreaks of rain. To the east, although rather cloudy, some clear spells allowed temperatures to fall low enough for a touch of ground frost with some patchy mist and fog. However this soon lifted as the rain moved in through the night. By dawn broken cloud had pushed across western areas, the rain giving way to showers across Northern Ireland. During the day the rain continued to edge slowly east, some of it heavy, becoming confined to North Sea fringes by evening. Brighter skies followed the rain across most of the United Kingdom, but with frequent showers for Northern Ireland and western parts of Scotland, England and Wales. Some of the showers were heavy, with hail and thunder mixed in. Most places were dry during the evening with clear periods, but with a few showers still in the west, and a few in the east. Southeasterly winds preceded the rain, strong across Scotland, with northwesterly winds following. These northwest winds were fresh locally strong around exposed coasts. Temperatures were locally above average.

EXTREMES

Highest Maximum:
11.6 Jersey Airport, Jersey
11.6 Scilly: St Marys Air, Isles Of Scilly
Lowest Maximum:

SIGNIFICANT WEATHER

Summary of UK Weather for Thursday 05 December 2002.

Many parts of the UK had a dry night with clear spells. There was more cloud in north and east of Scotland though, with some heavy rain in Buchan and the Northern Isles. There were also a few showers in eastern England.

During the day, much of England and Wales was dry with good sunny spells. It was more cloudy in eastern areas though where there were also a few showers. In Scotland the best of the bright weather was in the west and south. It was more cloudy in the north and east with some rain or showers in places. Northern Ireland was mostly dry with some sunshine.

In the evening, the cloud in the east pushed westwards across much of England although the far west stayed largely clear. There were a few spots of rain and drizzle accompanying the cloud. Northern Ireland and western Scotland were also largely dry and clear but eastern Scotland remained cloudy with a few showers.

Temperatures were mostly near normal although some of the cloudier areas of the northeast were mild.

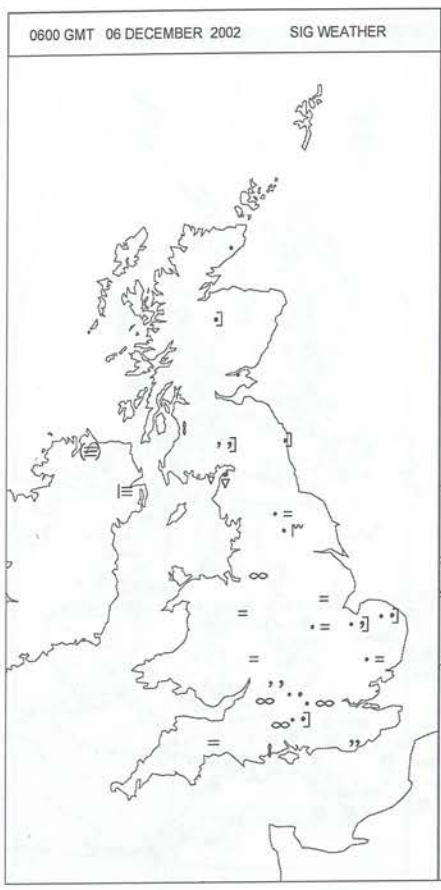
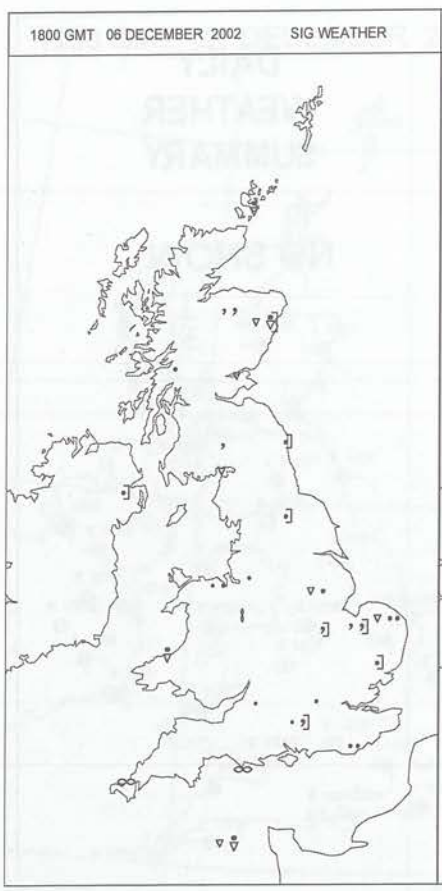
SIGNIFICANT WEATHER





Summary of UK Weather for Friday 06 December 2002.

Most parts of the UK were cloudy overnight and patchy light rain spread westwards to affect eastern and then some central parts of both England and Scotland. The Western Isles also had rain at times. Some cloud breaks did occur, these particularly across Northern Ireland where patchy fog and frost formed.

During the day, most places remained generally overcast. Across Northern Ireland the fog patches cleared during the morning but here too it turned out to be a rather cloudy day. There was a lot of dry weather across the UK but some patchy light rain and drizzle fell in places, chiefly in eastern and central parts. The best of any cloud breaks occurred in sheltered western parts and across southwest Wales and Cornwall there were several hours of sunshine. Temperatures were close to normal for the time of year but it felt quite cold in a east to northeasterly wind and temperatures remained rather cold in parts of Northern Ireland where the fog was slow to clear.

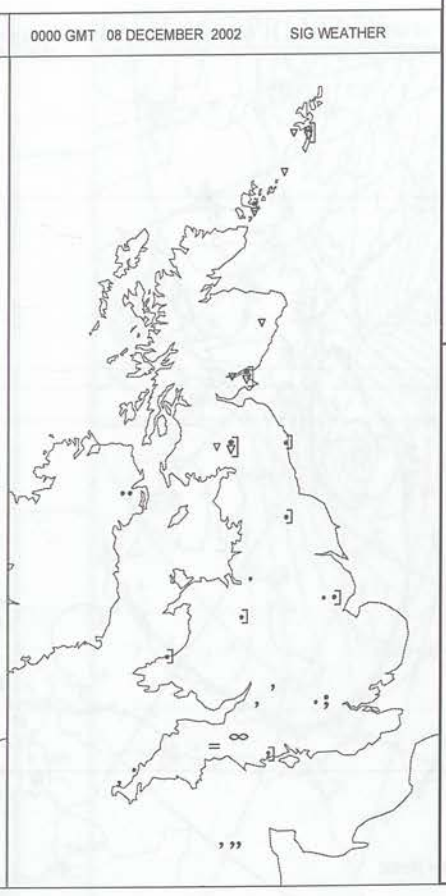
SIGNIFICANT WEATHER



Summary of UK Weather for Saturday 07 December 2002.

Overnight, cloud covered much of the UK and light rain or drizzle fell at times in many places. Some cloud breaks formed to the west of high ground and these were most prevalent across west Scotland and west Wales. Local air frost occurred in Scotland where the cloud broke for any length of time.

It remained generally overcast across the UK during Saturday and there were further spells of light rain or drizzle in many eastern and central areas. There was also a little light rain or drizzle in some western parts too but here there was more in the way of dry weather and the best of any sunshine was reserved for the Western Isles, the far northwest of England and Northern Ireland. The mostly cloudy and at times damp conditions continued through the evening in most parts of the UK.

Temperatures were near normal in west Scotland but rather cold elsewhere and the coldness was accentuated by a brisk northeasterly wind in eastern and southern areas.

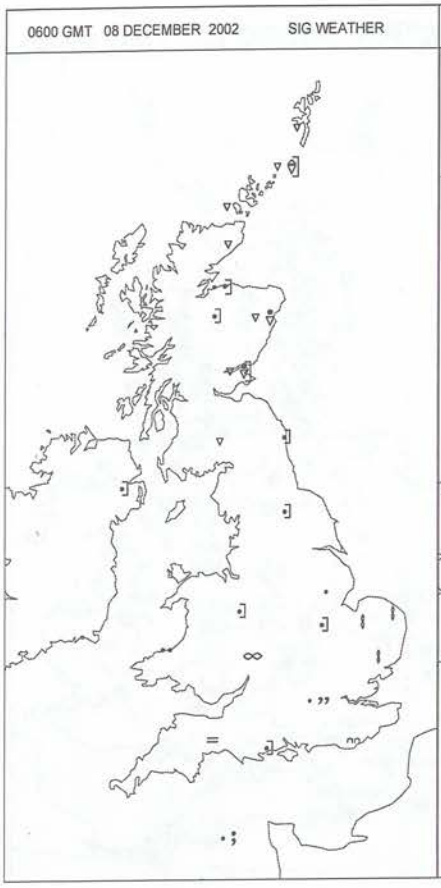
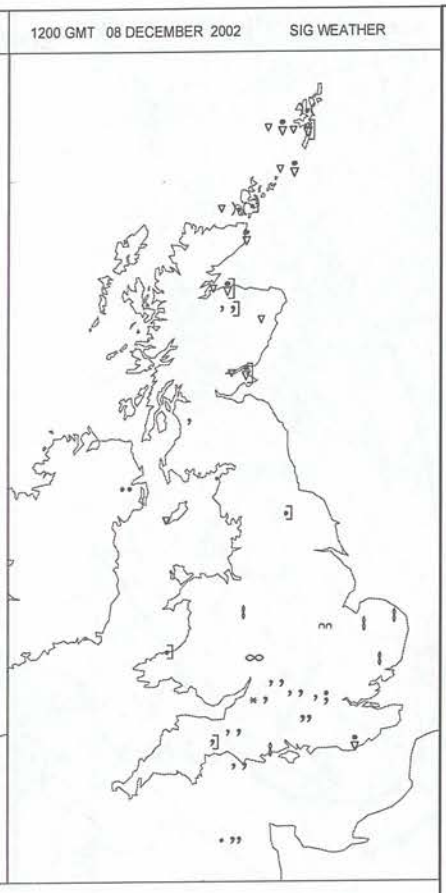
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 08 December 2002.

Most parts experienced a cloudy and misty night with outbreaks of mainly light drizzle. The drizzle was more evident across southern counties of England and the Channel Islands. Western Scotland saw some clear spells.

There was little change during the day. Many places were dully and misty with further outbreaks of chiefly light drizzle. Once again, the drizzle was mostly across southern England and the Channel Islands, but not exclusively so. A dusting of snow was reported on Dartmoor during the morning. Showers affected parts of Northern Ireland. There some breaks in the cloud with western Scotland, and northwestern parts of England and Wales seeing some sunny spells.

It was generally cold or rather cold. The brisk east to northeast winds added a significant wind chill.

SIGNIFICANT WEATHER

Summary of UK Weather for Monday 09 December 2002.

Cloud cover was rather variable, although often quite extensive across the British Isles overnight, bringing a few light showers to northern areas, and some early patchy light rain or drizzle to more southern parts. Southwest England held onto the thickest cloud sheet however, and there was occasional light rain here throughout the night. Where clear spells developed elsewhere, a ground and localised air frost formed.

Central and eastern parts of Scotland along with northeast England, saw a rather cloudy day with the odd patch of light rain, and cloudy, damp conditions also continued to affect parts of southwest England. Elsewhere it was dry with bright or sunny skies. A raw east to northeasterly wind plagued all parts.

There was little significant change during the evening, although the cloud became more broken in southwestern areas, and under clear periods, a fairly widespread ground frost and more patchy air frost returned to England and Wales.

Temperatures were mostly normal in the north of the British Isles, but generally cold in southern areas.

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 10 December 2002.

Northern Ireland and the western fringes of Scotland had a dry night with broken cloud and the cloud remained well broken through the day.

Across northeast England and the rest of Scotland it was a rather cloudy night, with pockets of rain in the east and snow across the Grampians. Skies remained rather cloudy across these parts during the day with showers plaguing the east coast.

For Wales and the rest of England, skies were initially largely clear. However, cloud spread northwards across southern England, East Anglia, the Midlands and much of Wales before the end of the night and these parts remained cloudy through the day. The cloud brought flurries of sleet and snow, particularly to the Channel Island and West country, enough to give a brief covering across the moors. Later in the day the sleet and snow turned to rain.

Across the rest of England, skies remained largely clear and it was a fine day with plenty of sunshine.

It was very cold across the southern half of the UK and cold or rather cold elsewhere, accentuated by a keen easterly wind.

EXTREMES

Highest Maximum:
9.9 Scilly: St Marys Air, Isles Of Scilly

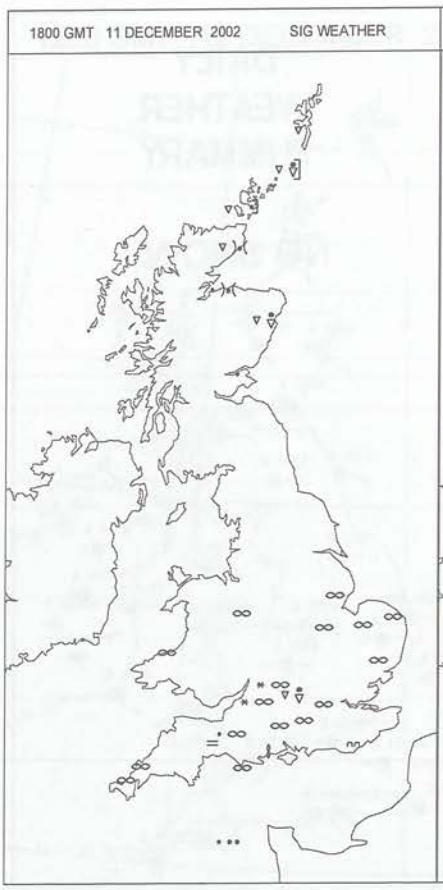
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 11 December 2002.

It was a dry night across Northern Ireland, western and southwest Scotland with well broken cloud. It remained fine and dry across these parts through the day with good spells of sunshine.

Northern and eastern Scotland had a cloudier night with some pockets of rain and snow fell across the Grampians. During the day the thicker cloud became confined to northeast Scotland with brighter spells developing elsewhere but during the evening the cloud rolled back in from the east.

For northern England, the north Midland, north Wales and northern parts of East Anglia it was dry, with largely clear skies overnight and plenty of winter sunshine during the day.

For the rest of England and Wales it was rather cloudy throughout. Outbreaks of rain affected Cornwall with pockets of rain elsewhere, mainly from Hampshire and Wiltshire westwards. Over the hills the rain fell as sleet and occasionally snow.

Temperatures were close to normal across Northern Ireland, much of Scotland and the far southwest of England. Across northern England it was rather cold but elsewhere it was a cold or very cold day.

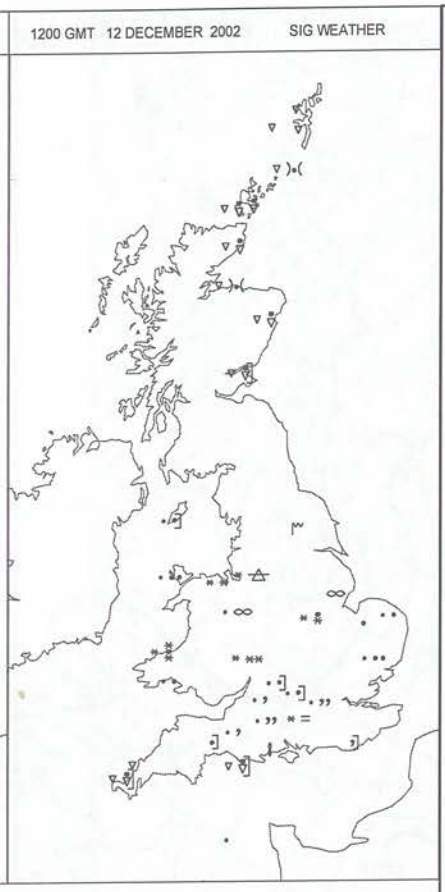
SIGNIFICANT WEATHER



Summary of UK Weather for Thursday 12 December 2002.

The night was dry across most of the United Kingdom with local frost, chiefly over inland areas and the higher ground. Scattered showers developed across the east coasts of Scotland and towards the Northern Isles. Thicker patches of cloud produced sleet and snow across the Midlands with spots of rain over southeast England. Outbreaks of rain over southwest England moved slowly north and northeast to reach Wales, central and southern England by dawn. Some sleet and snow was observed, especially over the higher ground.

The rain area continued moving north during the day, slowly weakening as it reached northern England by evening. Sleet and snow fell in places, including the Cardiff area at first and across other parts of Wales, the Midlands and northern England. Scattered showers developed over Northern Ireland and eastern Scotland, but much of Scotland remained dry. Many areas over England and Wales became misty with drizzle and patchy fog during the afternoon and evening. Thundery showers developed around southwest England.

Temperatures were near normal in the far south of England and across Scotland, otherwise it was another cold or very cold day.

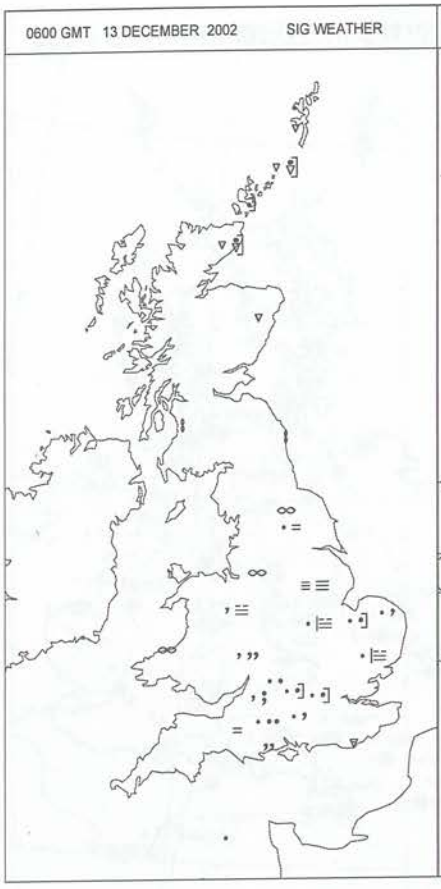
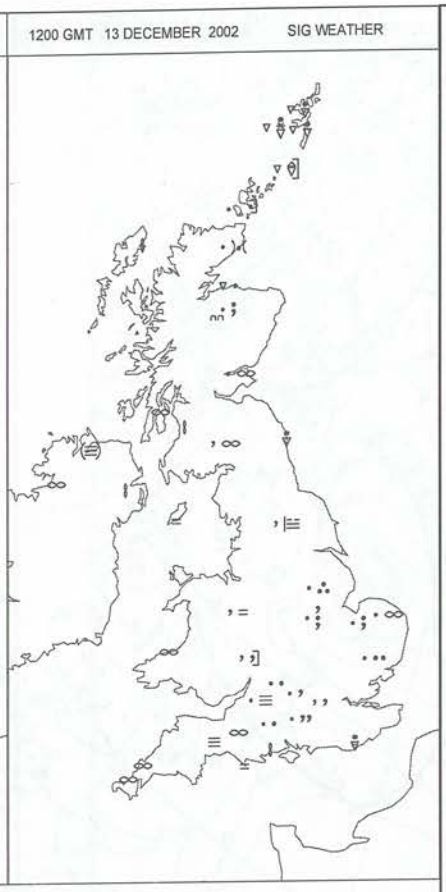
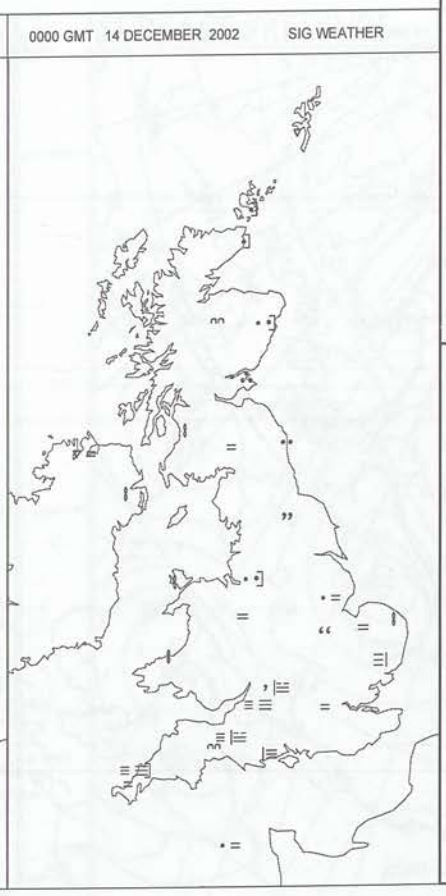
SIGNIFICANT WEATHER







Summary of UK Weather for Friday 13 December 2002.

Across Southwest England there were some clear spells, and scattered heavy showers for a while, otherwise most of England and Wales spent the night overcast, with misty low cloud and fog. Along the south coast showery outbreaks of rain proceeded to move inland from the English Channel, extending north into parts of East Anglia and the Midlands. Elsewhere it was also cloudy, with a frost across parts of Scotland and with a line of patchy rain extending through the English/Scottish borders across to Northern Ireland, falling as sleet or perhaps snow over the hills. During the day most of the UK remained cloudy, with any brighter spells in sheltered western parts of Wales. Some areas of England stayed misty and murky all day, with showers extending further into Northern England. Elsewhere there were odd pockets of light rain or drizzle through the day. After dark, most places stayed cloudy, with patchy fog and bits of drizzle around, but with some heavier showers over Northern England. Winds were light and gentle easterlies. Highs ranged from cold in the north to near average.

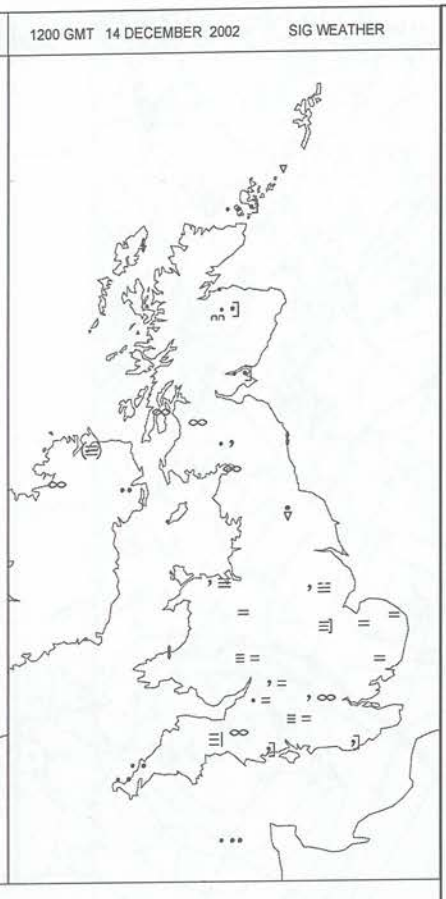
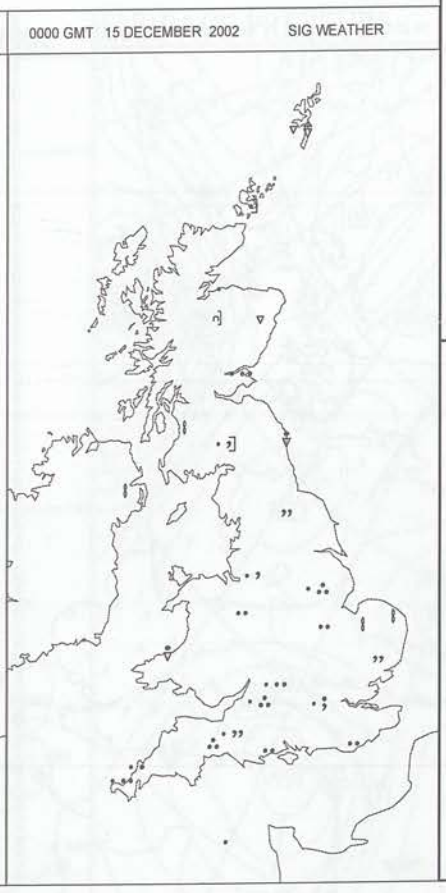
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 14 December 2002.

The night was damp across England and Wales with drizzle and fog patches in many areas and some heavier bursts of rain, with snow over hills, in some northern parts. Scotland and Northern Ireland were also largely cloudy. Parts of eastern and southern Scotland had some outbreaks of rain and there were some showers in Northern Ireland by morning.

During the day, England and Wales was cloudy. Fog lingered in a few areas. There were further outbreaks of rain in northern areas with some sleet or snow over hills. Some heavier rain reached the southwest during the day and spread to all southern counties during the afternoon and evening. Scotland and Northern Ireland also stayed mostly cloudy with some drizzle in places and some heavier showers in eastern and northern areas.

The evening was wet across Wales and the southern half of England. Some more broken cloud reached the extreme west of Scotland but elsewhere it stayed cloudy with some outbreaks of rain or drizzle.

Temperatures were mostly near normal but it was rather cold in parts of northern England.

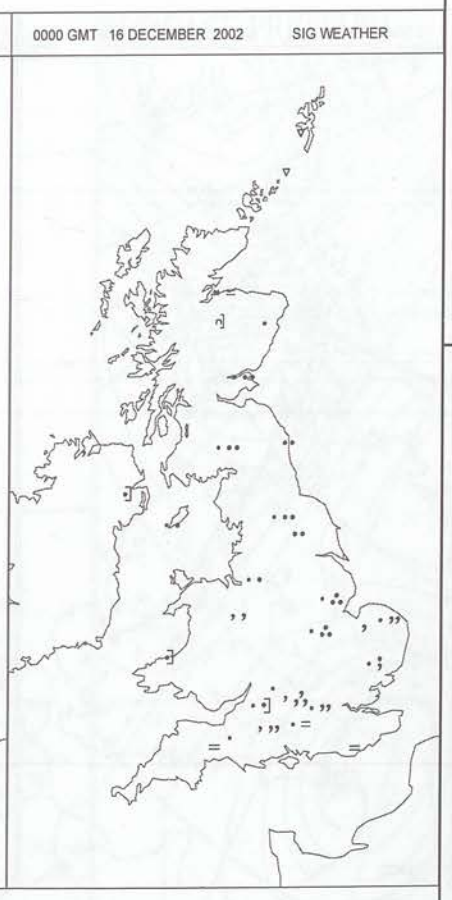
SIGNIFICANT WEATHER



Summary of UK Weather for Sunday 15 December 2002.

A mostly cloudy night with bands of rain across southern England, the Midlands and Wales. Rain spread slowly into northern England by the end of the night. Scotland and Northern Ireland were largely dry apart from a few coastal showers, a few of these were wintry. There were a few fog patches in Northern Ireland.

Most of England and Wales had a dull wet and windy day, with heavy rain at times. The heaviest rain fell across eastern and southeast England. In the afternoon the rain became patchy and light in the Midlands, southern England and west Wales. Rain edged into eastern parts of Scotland during the afternoon and a few wintry showers traversed the Northern Isles, but western parts had a largely dry day with some sunshine in the Western Isles.

During the evening rain continued to affect many parts of northern England and Wales and pushed into southern Scotland, but gradually died away from the south of England.

Temperatures were around average in southern England but it was rather cold everywhere else.

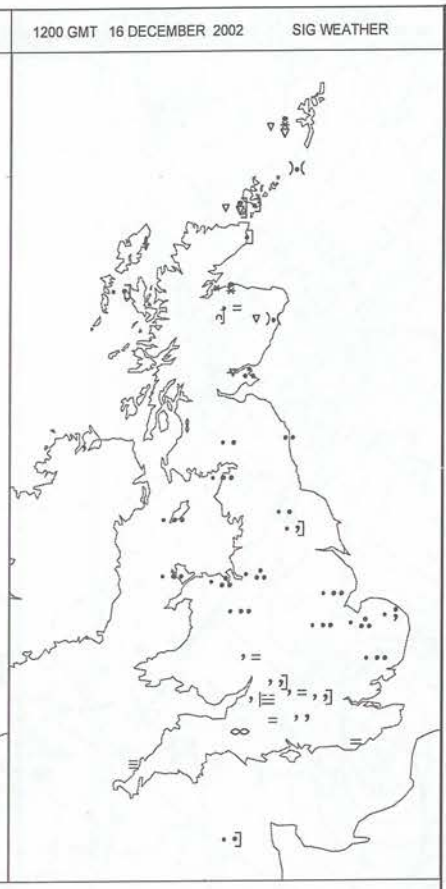
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 16 December 2002.

Skies were mostly cloudy overnight with outbreaks of rain and drizzle across much of England and Wales and southern Scotland. The rain was persistent north of Birmingham and south of Edinburgh, with heavy rain or sleet at times over higher ground. Southwest England and Wales was drier with clearer skies, patchy mist and fog. Northern Scotland had some wintry showers, and Northern Ireland was mostly dry but cloudy.

During the day the rain and sleet gradually became more patchy, but remnants of the persistent rain lingered between north Wales and East Anglia most of the day. Northern and eastern Scotland saw some wintry showers.

It was a cloudy day across much of the UK but the western and southwestern extremes of the mainland and Northern Ireland fared best with brighter skies and more sunshine.

The evening saw little change to the weather with patchy rain and drizzle, falling as sleet or snow in northern Scotland and over high ground elsewhere.

It was rather cold almost everywhere in the UK, apart from the far southwest of England where temperatures were around average.

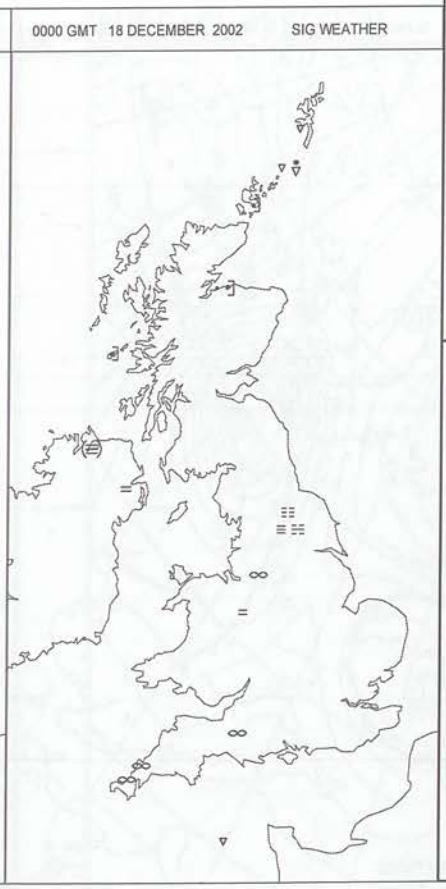
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 17 December 2002.

Rain over central southern England petered out during the early hours of the morning but scattered showers affected eastern coastal areas of England and Scotland throughout the night. Clear skies over central Scotland gave a sharp frost, and freezing fog developed over northern parts of county Londonderry and Antrim.

During the morning outbreaks of rain reached the Outer Hebrides and spread to northwest Scotland during the afternoon. Scattered showers affected eastern coastal areas of England during the morning, and East Anglia and southeast England during the afternoon. Soft hail showers were reported from Coltishall in Norfolk during the afternoon. Eastern parts of Scotland and western parts of England had a dry and fairly sunny day.

Outbreaks of rain continued over northwest Scotland during the evening, and the scattered showers over eastern England became largely confined to the extreme southeast. A sharp frost returned to Northern Ireland, northern England and southern Scotland, with patches of freezing fog.

Temperatures generally across the country were rather cold, but it was cold over parts of Northern Ireland and normal over northwest Scotland and the Outer Hebrides.

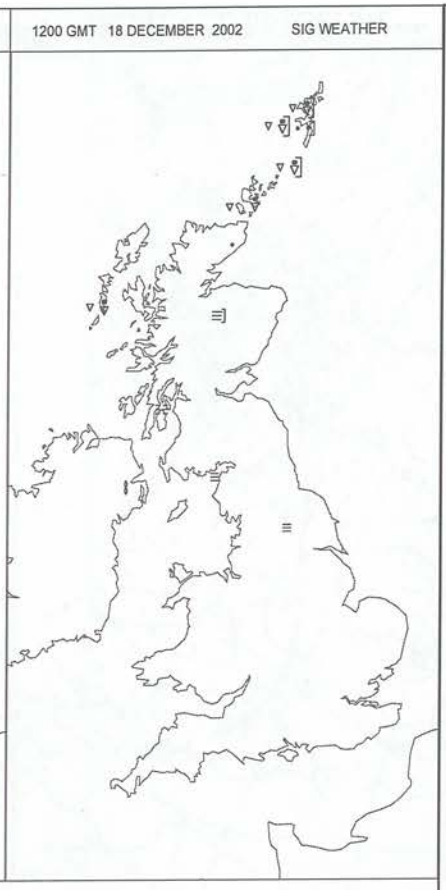
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 18 December 2002.

Overnight there was a good deal of dry weather with some clear spells but mist and fog patches developed across northern England. Showers affected parts of southeast England, particularly Kent and Essex, and the odd shower was reported in northern Scotland.

The fog cleared slowly during the morning leaving the bulk of the UK dry with variable amounts of cloud but also lengthy sunny periods. The best of the sunshine was across Kent where over 7 hours was recorded, but conversely southwest England, the Hebrides and the northern isles had very little, if any. Some mainly light showers developed across the northern isles and the Hebrides around midday. The largely dry and fairly sunny weather continued into the afternoon but showers also affected parts of the northern and western isles. The evening saw the continuation of the essentially dry and settled weather but fog patches reformed in parts of northern England. It was a windy day across the southwest of the UK with strong easterlies.

Temperatures were mostly near or slightly below the average for the time of year.

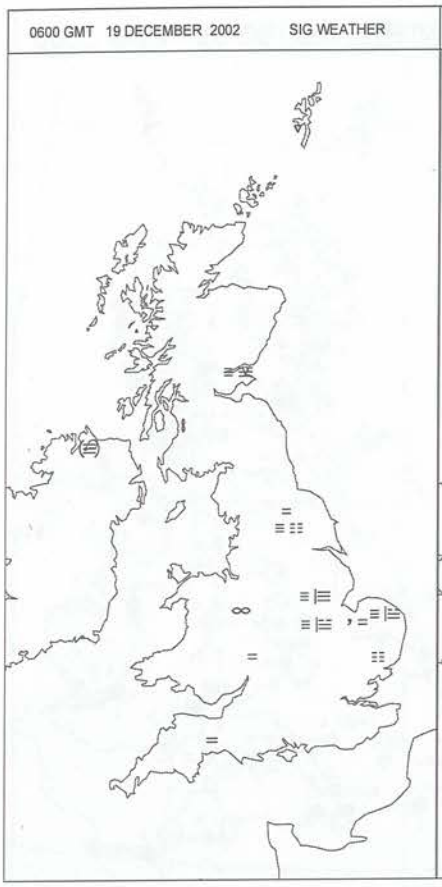
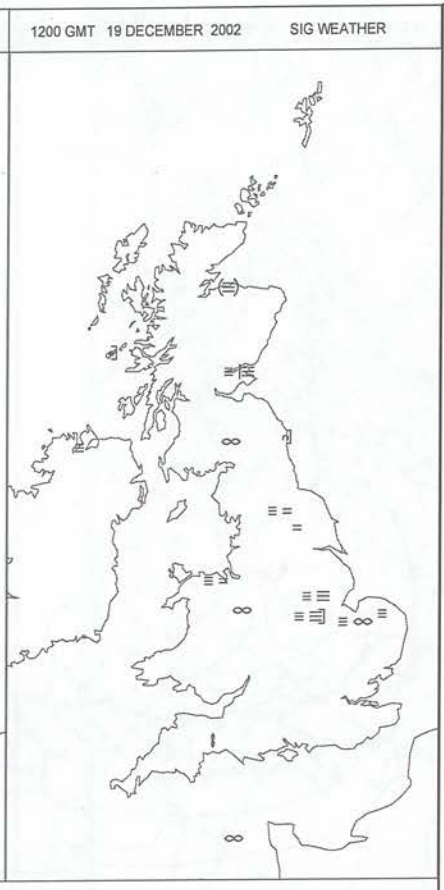
SIGNIFICANT WEATHER





Summary of UK Weather for Thursday 19 December 2002.

Through the early hours it was dry and mostly clear with a widespread frost, whilst in the east Midlands, Northeast England and southern Scotland there were mist and fog patches. The southwest of England and southwest Wales escaped a frost owing to the fresh to strong east to southeasterly breeze.

There was some patches of low cloud over East Anglia which drifted north along eastern coastal counties but other areas were largely free of low cloud and had periods of hazy sunshine. High cloud steadily increased though, from the southwest through the course of the day. Most fog patches dispersed by the midday, but a few thick patches remained or were reforming prior to dusk in Northeast England, the East Midlands and Central Scotland.

Outbreaks of patchy light rain fed across western Cornwall early evening, whilst elsewhere across the south it became increasingly cloudy, although still a frost occurred in the east. Further north the frost returned under the fairly clear skies.

Temperatures were mostly average or a little below, but where it remained foggy for much of the day temperatures were very cold.

EXTREMES

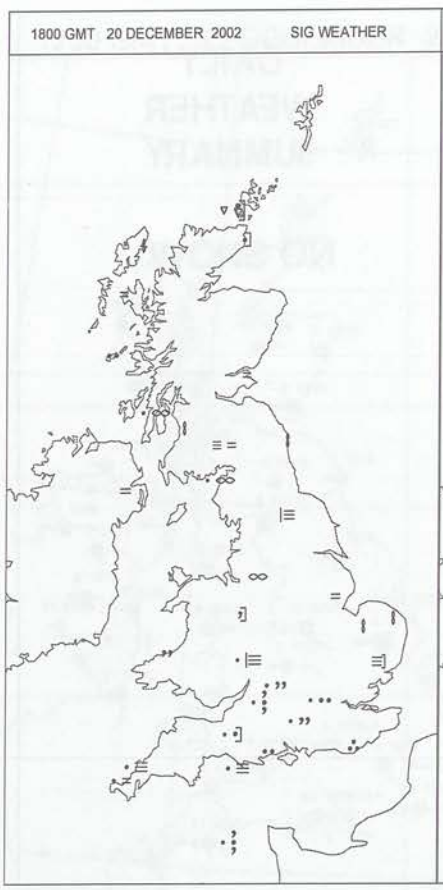
SIGNIFICANT WEATHER



Summary of UK Weather for Friday 20 December 2002.

Scotland and northern England were dry through the early hours with a widespread frost, whilst further south low cloud was spreading slowly northwards. Showery bursts of rain spilled into west Cornwall, but most other parts were dry with some patchy fog and mist becoming extensive in the south.

In the morning the low cloud in the south thickened giving some patchy light drizzle, whilst a further pulse of rain moved into Cornwall and later Northern Ireland. Heavier bursts of rain by midday had spread into Southwest England and South Wales, but for the bulk of the country it was dry but with sunshine at a premium. Even at midday though, there were a few fog patches with temperatures below freezing in Scotland.

In the afternoon the heavier rain shifted east across the whole of the south with mist and fog patches following in its wake.

Temperatures were very variable ranging from very mild values in far southwest, mostly near normal in the south but generally cold and very cold in foggy parts of the north.

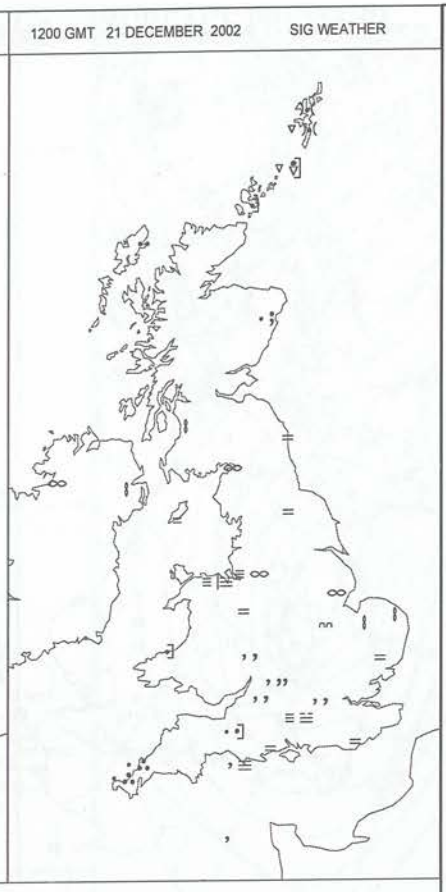
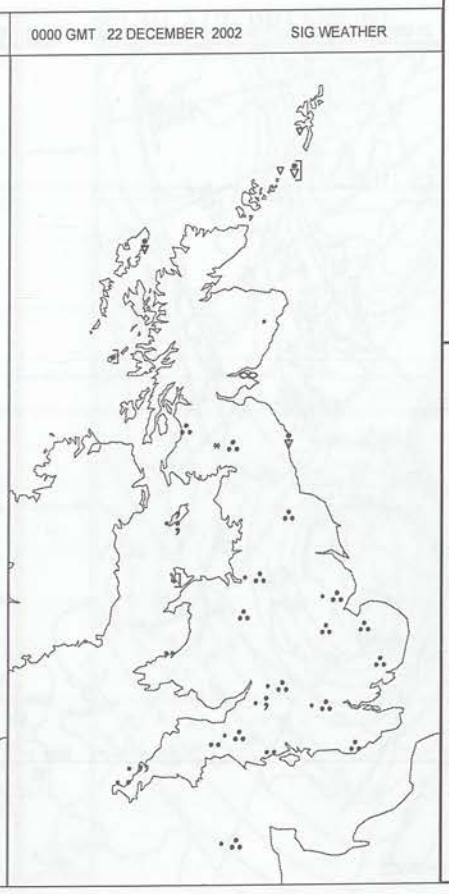
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 21 December 2002.

There was mist and fog over England and Wales overnight with a few spots of drizzle here and there. It was a mostly dry night over Scotland but there were a few showery outbreaks in the north.

Rain, heavy at times, reached southwest England during the morning and spread to Northern Ireland, most of Wales and central southern England in the afternoon. Most of the rest of England was dry but cloudy and misty with fog lingering in places. Scotland had a mostly dry but cloudy day although there was some rain in the northeast corner. The Shetland Isles had a little sunshine.

In the evening the rain spread to the rest of England and to southwest Scotland. It continued to be heavy in places with some snow for a time on northern hills. By the end of the evening some drier conditions had reached Northern Ireland and parts of West Wales.

It became mild in the southwest, temperatures were near normal in the south, in Northern Ireland and in western Scotland but it was rather cold elsewhere.

SIGNIFICANT WEATHER

Summary of UK Weather for Sunday 22 December 2002.

A cloudy night was had with outbreaks of rain in most places. The rain was heavy across many eastern parts of the UK. By the end of the night, the rain shrank away to northeast and southeast parts of the country.

By day, most places were dry. However, there were a few outbreaks of light rain and drizzle about, mainly across western parts. A good deal of the UK saw cloudy skies for the whole day, but cloud breaks developed over some central and southern parts of England during the afternoon giving a little sunshine. Northern England and southern Scotland saw rather misty weather with some fog patches. There were also fog patches in the southwest of the country.

During the evening there was little change in the weather, though some more persistent rain moved into southwest England.

Temperatures were generally mild across the UK, and it was very mild in southern England.

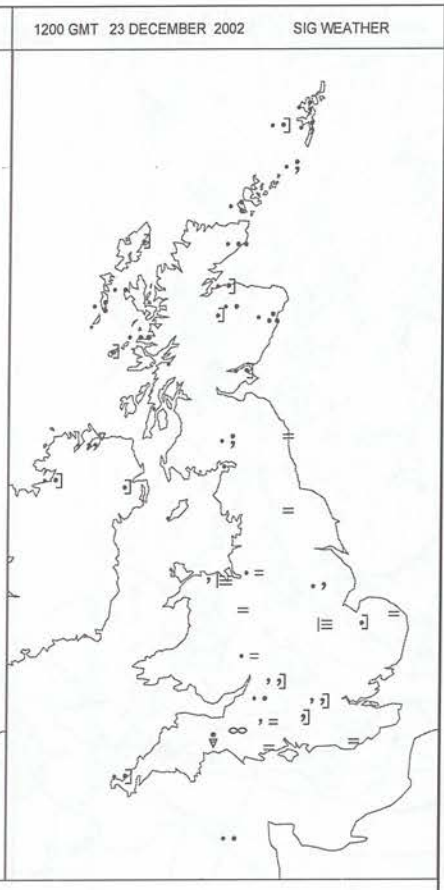
SIGNIFICANT WEATHER



Summary of UK Weather for Monday 23 December 2002.

Overnight most places were cloudy with outbreaks of rain spreading in from the southwest. The rain was light and patchy across most southern parts, especially the southeast of England. Heavier rain spread into northern England and southern Scotland, with places to the southwest of high ground seeing the heaviest rain. There was patchy fog particularly over hilly areas.

During the daytime, the UK skies remained cloudy, and it was a dull day in many places with patchy fog. Southeastern parts of England saw patchy light outbreaks of rain. Further north and west there were more persistent periods of rain, especially during the afternoon. The rain was heavy in many places exposed to the southwest, with highest totals in Cumbria, South Wales and southwest Grampians.

Drier weather and broken cloud spread in from the west during the evening across Northern Ireland, Wales and southwest England. Other parts of the UK saw further outbreaks of rain, which were heaviest in northern England and southern Scotland.

It was a mild day across the UK, with very mild temperatures in many western parts of the UK.

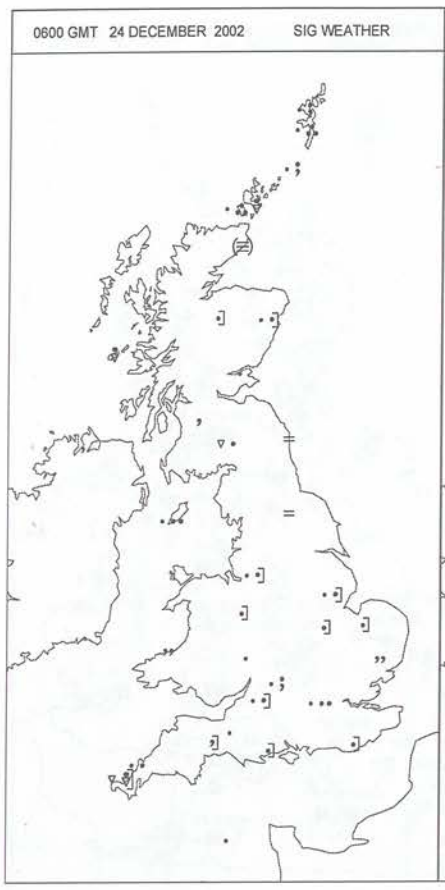
SIGNIFICANT WEATHER



Summary of UK Weather for Tuesday 24 December 2002.

Rain across Wales, Northern Ireland and western parts of England pushed steadily eastwards overnight but became more fragmented over eastern England. Rain also affected eastern parts of Scotland overnight.

During the morning the rain cleared from Northern Ireland but continued over Wales, western counties of England and much of Scotland. By midday the outbreaks of rain were affecting areas north of a line from Cornwall to Durham. Eastern parts of England stayed dry, with the best of the sunshine across Lincolnshire and East Anglia. Through the afternoon the rain became mostly confined to the western half of the UK, with rain returning to Northern Ireland.

During the evening outbreaks of rain continued in the west, but a pulse of heavy showers ran across central southern England and into southeast England.

It was an extremely windy day over the Shetland Isles with a gale force southeasterly wind and gusts between 55 and 60 knots. The highest recorded was at Sella Ness, who had 61 knots at 1700.

Temperatures were exceptionally mild across southeast England, central southern England, East Anglia, The Midlands and south Wales, and very mild elsewhere.

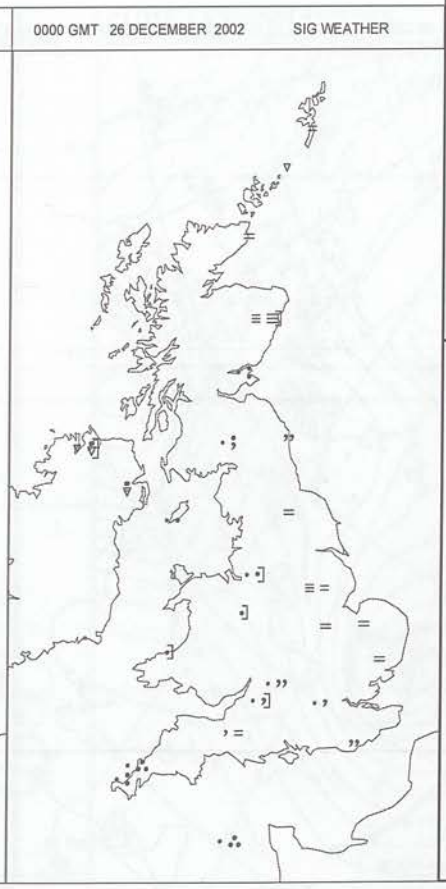
SIGNIFICANT WEATHER



Summary of UK Weather for Wednesday 25 December 2002.

As one band of showery rain ran across Scotland, another proceded across southern England early in the morning. A few showers then followed on behind into northwestern Scotland and northwest Wales. It was mild almost everywhere, whilst some mist and hill fog patches developed as the thicker cloud cleared in the wake of the rain bands.

Southern areas of England had some sunshine at times during the morning, whilst more northern parts of England and southern Scotland were bright at best. Another band of cloud and showery rain moved eastwards across central and northern Scotland, in particular later in the morning.

In the afternoon southern areas tended to become more cloudy, whilst in northern Scotland there was more in the way of cloud breaks affording some sunny periods. Late in the afternoon thickening cloud spread outbreaks of rain up from the southwest with this reaching Northern Ireland by mid evening and as a fragmenting band, at the same time, also central southern England.

Temperatures were mostly mild or very mild with only the islands in the north having temperatures around normal.

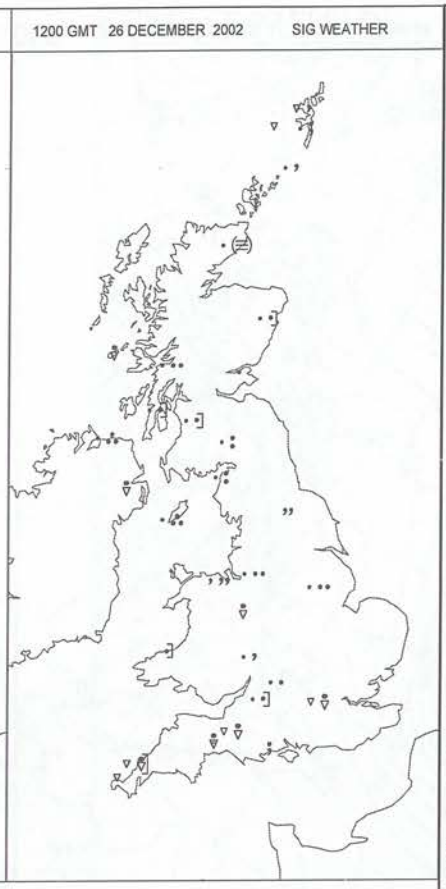
SIGNIFICANT WEATHER



Summary of UK Weather for Thursday 26 December 2002.

A generally rather cloudy day over the UK on Boxing Day with bands of rain moving north in the mild southerly airstream. The largest and most active of these bands of rain arrived in the far southwest of England in the early hours, associated with a small but fairly intense low, and quickly moved northeast to affect the whole of England and Wales by dawn, slowing down thereafter but giving N Ireland and Scotland, except the far north, a fairly wet afternoon and evening, though the rain tending to die out later. To the south, over England and Wales, it turned drier but with a scattering of showers but there were some sunnier intervals too. During the early evening yet another band of rain, some heavy, moved in a similar fashion northwards, reaching north Wales and Northern England by the end of the day. Winds were mostly south to southeasterly and were fresh or strong at times. Temperatures were generally mild or very mild though it was a touch chilly in Scotland early on. (Kinbrace -3C). Cardinham (Cornwall) had 1.35ins in the 24hr to 1800z.

SIGNIFICANT WEATHER

Summary of UK Weather for Friday 27 December 2002.

Rain, heavy at times, moved northwards across England and Wales overnight. Drier weather followed into many southern areas before dawn but more heavy showers developed in the west. Scotland and Northern Ireland were largely cloudy with a little light rain or drizzle but there was some heavier rain over Shetland.

During the day there were outbreaks of rain across northern England and Scotland with the heaviest over northern England and southern and eastern Scotland. There were some heavy showers across other parts of England and Wales. Northern Ireland saw some rain in the morning but it dried up in the afternoon. Most places were cloudy but a few bright intervals developed, mainly in the southwest.

By evening there were still some showers in the southeast, a few in western areas and some in eastern Scotland. There was some drizzle in other northern areas and it was generally cloudy across the country but some clear intervals developed in southern and western areas.

Temperatures were mostly mild or very mild.

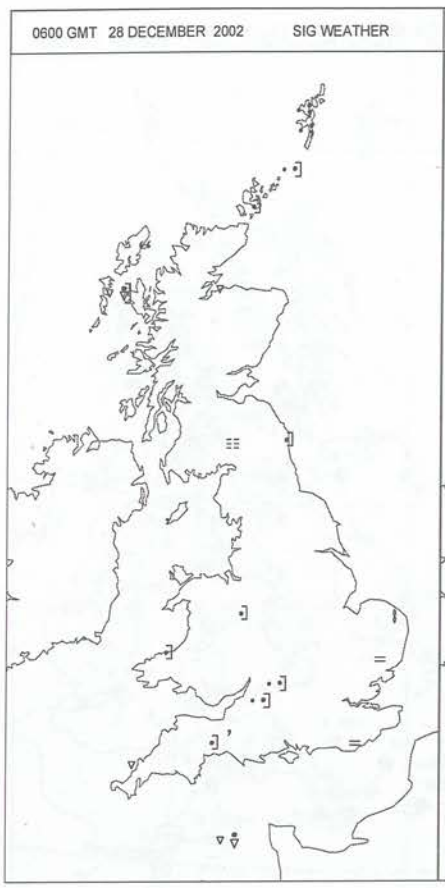
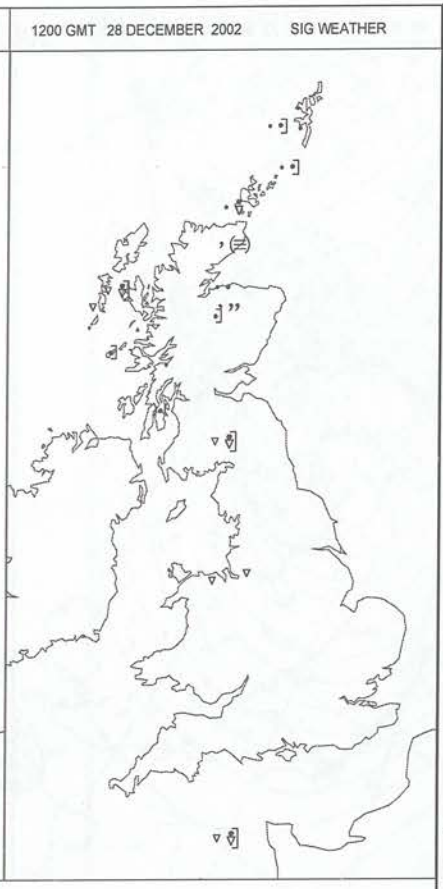
SIGNIFICANT WEATHER





Summary of UK Weather for Saturday 28 December 2002.

Northern Ireland had variable cloud overnight and isolated showers along the north coast. Scotland was mostly cloudy and there were some outbreaks of rain, chiefly in the northwest. There were some showers over the southwest of England, in the Channel Islands and west Wales. After some clear spells across eastern England, all of England and Wales turned cloudy by morning.

Northern Ireland had a sunny day before increasing cloud brought some rain to the southwest of the Province by late evening. Most of Scotland had a cloudy day and there were some scattered outbreaks of rain, with these mainly to the north of the Central Lowlands in the morning.

Much of England and Wales had extensive cloud but there were some notable exceptions. Southern counties from Sussex to Cornwall had several hours of sunshine and there were some sunny breaks up into the Midlands, northeast England and east Wales. There were some showers over the southwest of England and in the Channel Islands. Rain reached Cornwall and fringed southwest Wales by late evening.

It was generally mild.

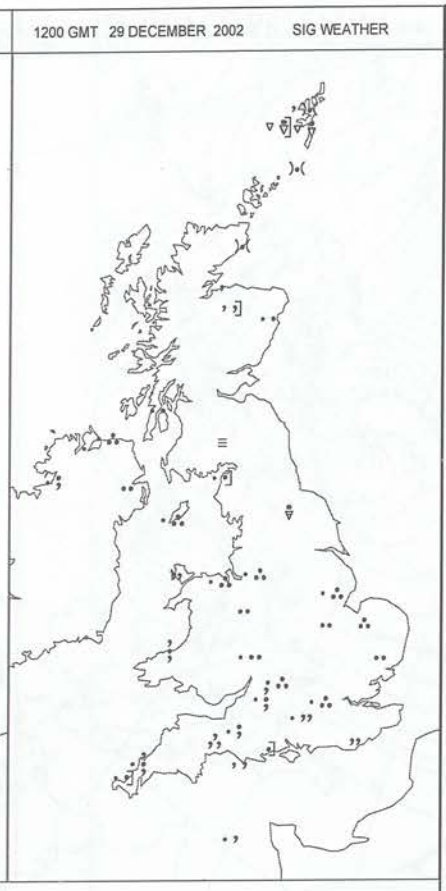
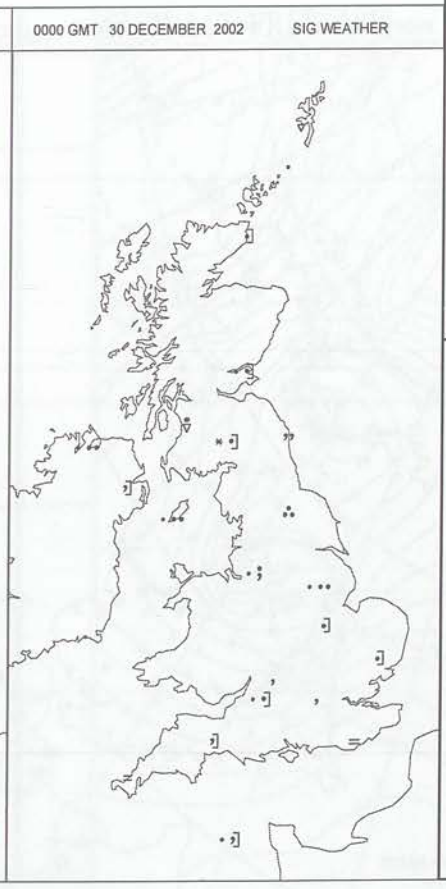
SIGNIFICANT WEATHER





Summary of UK Weather for Sunday 29 December 2002.

Rain, heavy in places, pushed northeastwards during the night to affect all but northern England and Scotland by daybreak. Patchy fog developed across southern Scotland late in the night.

The rain, still heavy in places, continued to edge northeastwards during the day, reaching northern England in the morning and southernmost parts of Scotland in the afternoon. The rain across southern England and south Wales became lighter and more drizzly in nature with time. The cloud also tended to lower, giving fog over the hills and along windward coasts. Northern Ireland became drier for a time in the afternoon before more rain arrived towards dusk. There were reports of snow above 350 metres across northern England during the evening.

For the rest of Scotland, occasional rain affected parts of the east. Central and western areas were largely dry but cloudy.

The temperatures were close to normal across Scotland, Northern Ireland and northern England. Wales and the rest of England had a very mild, and locally exceptionally mild, day.

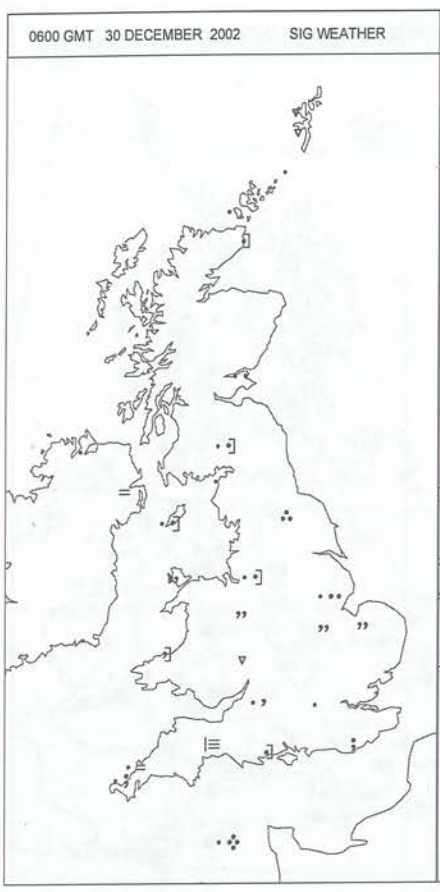
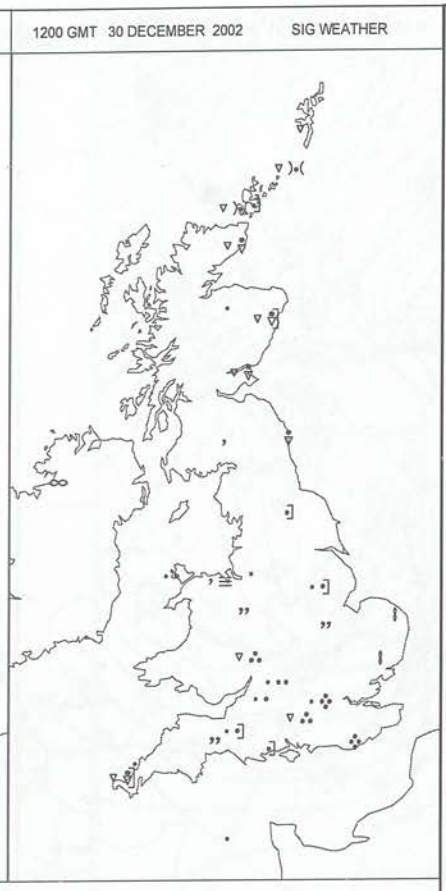
SIGNIFICANT WEATHER





Summary of UK Weather for Monday 30 December 2002.

Overnight, skies were clear in the far northwest of the UK. Elsewhere it was rather cloudy with rain and drizzle. A more persistent area of rain straddled northern England, it was heavy at times with reports of snow over high ground, but gradually died away.

During the morning a band of rain, already into the southwest, swept into Wales and southern England by midday then stalled, giving prolonged and very heavy rain in places. It was a very wet day in southeast England, including London. Sunshine and showers followed into southwest England.

Apart from some patchy mainly light rain in northern and eastern parts of England, Scotland and Northern Ireland it was dry north of the Midlands. Western parts of mainland Scotland and the Western Isles were dry and saw a few hours of sunshine.

The rain gradually became lighter and confined to the southwest and southeast of England in the evening, with patchy light rain elsewhere and a few cloud breaks in the far north.

Temperatures were below average in many places north of the Midlands. In southern England it was still very mild.

SIGNIFICANT WEATHER

Summary of UK Weather for Tuesday 31 December 2002.

Northern Ireland and Scotland had a cloudy and mostly dry night. Persistent rain over southern parts of England cleared early on and England and Wales was then cloudy and generally dry.

Northern Ireland had a cloudy day with some light rain by the end of the morning. In the evening some heavier rain spread from the southwest. Western and southern parts of Scotland were cloudy but stayed dry until evening, when a band of sporadic rain spread from the southwest. There were some good cloud breaks in the east and in Moray it was sunny. There were a few showers in the Northern Isles, some of them wintry later.

Most of England and Wales had a cloudy day. There was some rain across Wales and the southwest at times and other southern counties of England, chiefly in the afternoon. Bands of more organised but still sporadic rain edged into the Channel Islands, southwest England and Wales in the evening.

Temperatures were close to average across Scotland, Northern Ireland and western Wales and England but it was rather cold elsewhere.
